

Ethics of Data Science

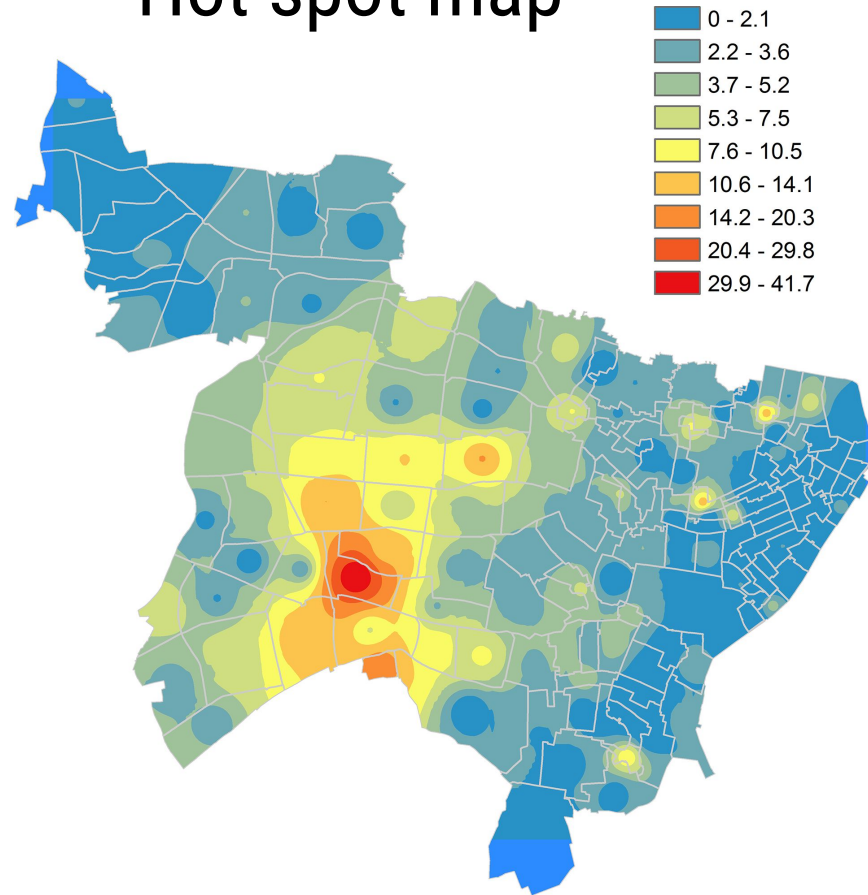

Getting Started

Source: The Verge

Hot spot map

1. Go through your data and make sure there is not any major flaw in your data collection.

2. Check for common mistakes in your analysis and make sure your methodology is valid and defensible.

3. The results of your work can not be used to harass people, especially minorities, in any way.

4. Your analysis is independent of your opinion about the specific problem you're trying to solve using data.
