NEW YORK (AP) — Credit agency Equifax traced the theft of sensitive information about 143 million Americans to a software flaw that could have been fixed well before the burglary occurred, further undermining its credibility as the guardian of personal data that can easily be used for identity theft.

Equifax identified a weakness in an open-source software package called Apache Struts as the technological crack that allowed hackers to heist Social Security

Options traders are betting that Equifax's stock will drop further following last week's announcement of a security breach. Reuters / Brendan McDermid

Just because data is sort-of public, doesn't mean that it's ethical to collect en masse.
